MIDAS 100

1. The following circuit diagram is a simplified representation of the actual circuit. It is intended to show the general arrangement of the components and their interconnections. The actual circuit may differ in detail from this simplified representation.

2. The components shown in this diagram are of the type specified in the parts list. The actual components may be of a different type, but they must perform the same function as the components shown in this diagram.

3. The components shown in this diagram are of the type specified in the parts list. The actual components may be of a different type, but they must perform the same function as the components shown in this diagram.
